Dear …,

I am a Data Scientist and a former Helicopter Pilot. I am applying to the Product Intelligence Data Scientist position at Joby aviation because I believe my skills as a Data Scientist combined with my domain knowledge in aviation will be a great asset to Joby aviation. During my 10-year career as a pilot, I have learned the value of teamwork, safety, leadership, and communication.

As a Data Scientist, I have a deep understanding of machine learning principles. I have worked with large dataset, performed data cleaning, EDA, web scrapping and advance feature engineering to prepare the dataset for modeling.
I have experience with various machine learning models such as Linear Regression, Logistic Regression, KNN, Decision Trees and Deep learning. I am fluent in programming languages such as Python, SQL, and JavaScript.

With an expected commercial launch date of 2024, Joby aviation is leading the EVTOL race to provide intercity transportation to people. I am excited to be a part of its journey.

Thank you for reviewing my application. I look forward to hearing from you.
